More information about my site USMLE & Board Materials, Medical Book Store Hello, looking for any superficial pharm PDF notes videos, drugs, and notes on drugs easy cti + find. I have a PDF of the original release pharm but they do not have neuro, which is my weakest topic. Thank you, in advance! Page 2 of 2 comments Visit the help section or contact us these are the complete SketchyMicro and SketchyPharm Anki blankets that I did while I was studying usml step 1 and COMLEX Level 1! I found that Anki was the best way to remind me of all sketchymedical sketches. I remember them all and I use that knowledge in my clinical rotation. I'm telling you, Anki = long-term memory. If you don't know what Anki is or how to use it, you can read about it and download the app here. To read how I learned boards and get all my tips and tricks, check out my blog post here. Around these decks of cards on this deck contain small, cropped parts of a general sketch - they force you to focus on all the small details of each sketch. You need to download these blankets to your computer, not your phone. Anki must also be installed on your computer. Once you've downloaded them to the computer where the anki is installed, open them. They open directly into your Anki app. Now that they're on your COMPUTER, you can sync your Anki account with your phone so you can access them while you're here. Notes labeled *edited_by_nicolet.life are the cards for which I added my memory hook. If you don't want to use them, you can delete them by sorting your cards by this label, highlighting all the cards under this label and simply deleting them. Gray font text is additional information. Text black font is the most important, high yield information. Download my SketchyMedical Anki Blankets here: SketchyMicro & SketchyPharm Anki Blankets Buy Me Coffee? If you want to decks and want to support the creator, you can buy me coffee using the button above, share this page, and/or leave a comment below! Thank you and happy learning ♥ this post is not sponsored by any of the companies mentioned above. Reviews of this post are only my own. Page 2 of 26 comments How do I share UWorld Questions: First 3-4 weeks, I did 1 block of UWorld a day (40 questions) until you, do you want to do a topic you cover (eg cardiology only) or mixed questionsWeek 4-5: 2 UWorld blocks a day Last week: did nothing but 4 UWorld blocks / day + Anki cardsResources:I stuck to the resources I have used during the school year & has liked it. Including, but not limited to: BRS Physiology, Pathoma, Sketchy Medical, DIT video lectures, Goljan Pathology Rapid Review (thick book- used only to look for specific things), Goljan Audio lectures + notes (both floating around free online), Kaplan Q bank, UWorld, First Aid (should remind you pretty much everything in this book)Towards the end of my study period, I dedicated at least 2 hours each day to pass my Anki card pack. Probably covered over 1,000 cards a day. Step 1 is a reminder of the difficult exam that you just have to commit to everything in memory. I found Anki that this was the best tool for me. You can also use the Image Occlusion add-on for Anki to make flashcards out of tables, charts, etc. I have a brief tutorial on this one of my videos here if you are interested. There are also pre-made Step 1 Anki cards made by Brosencephalon that many people like. I made some blankets for him, but in the end I wanted to adjust my learning to my weaknesses so I mostly stuck to my own cards. Additional tips and tricks (general tips for taking BIG exams here): I kept a pretty regular sleep schedule throughout my study period and was mindful of my caffeine intake (very type A), so I get restful sleep at night. I spiral bound for my first aid book (it's easy to flip through & take notes). Some of my classmates did the same for Pathoma for the same reason. This can be done in any Staples or other office supplies stores. I also have my superficial video screenshots printed with color and spiral bound. Very useful investment-I found myself looking through them even as I learned step 2 CK. You can type and print notes for each video picture. It's super convenient if you want to stay away from computers (to avoid procrastination), but you want to quickly look for something up sketchy! uploaded all goljan audio to the old iPod & was it the only thing related to my car. I did a lot of long-distance driving esp on weekends bc my church was 1hr away so every time I stepped into my car, the lecture came. I basically listened to this whole thing repeated throughout the study period. Anki, can't you do that? It can't be emphasized enough. I had an Anki app on my phone, iPad and computer. I like the iPad version bc it's at least disturbing all the details. I many people. People. Use Quizlet to make your own flashcards. Choose one that works for you and stick to it! If you feel burnt out and tired, take a few hours off. It's better to go out and take a walk than sit in front of your books feeling unhappy With your NBMAE so close to your actual exam in terms of time, environment, etc. If your exam is scheduled in the morning then take your practice exams in the morning, wear comfortable clothes, use only the restroom during the set breaks, as if you were an actual examExam day: Bring lots of snacks. I took a break every 2 blocks, but you can decide that it is based on personal preference & endurance as it can be cold/warm in exam roomsRead what you can/can't bring to the exam room. I brought soft ear slings that were pretty helpfulLasti, plan something relaxing and fun to do after the exam! You deserve it! It!
